INSTALLATION INSTRUCTIONS

- 1 Remove the center screws.** Remove the center screw from both the top and bottom of the AudioFetch front cover. Retain both screws for reinstallation.
- 2 Position the rack mount.** Place the rack-mount bars across the front of the AudioFetch unit. Align each center hole in the mount with the corresponding center screw hole in the AudioFetch cover.
- 3 Reinstall and secure.** Reinsert the original screws through the rack-mount center holes and into the AudioFetch unit. Tighten until secure; do not overtighten.
- 4 Attach the assembly to the rack.** Position the completed assembly in the desired rack location and fasten both ends of the mount to the rack rails using appropriate rack hardware.

IMPORTANT: The original center screws secure both the AudioFetch front cover and the rack-mount bars. Confirm that both screws are fully seated before attaching the assembly to the rack.
